About

Infrastructure engineer with 12+ years spanning deep networking, cloud-native DevOps, and production systems reliability. My path started in carrier-grade networking — designing and operating HFC/FTTP access networks, MPLS routing, and site-to-site IPsec VPNs for financial institutions — before moving into DevOps, where I containerized and orchestrated enterprise Node.js and Java applications with Docker and Kubernetes, and led the migration from IBM CloudFoundry to CodeEngine for a large-scale insurance platform.

That combination — real networking depth plus hands-on container orchestration — is what draws me to infrastructure work that sits at the intersection of both: Kubernetes, OpenStack, and cloud networking. I'm currently pursuing the CKA (Certified Kubernetes Administrator) certification and planning to build hands-on OpenStack/DevStack experience next, while applying the same automation discipline I've used throughout my career — Python, Bash, and PowerShell — to reduce manual overhead and standardize environments at scale.

Looking for infrastructure or platform engineering roles where networking expertise and cloud-native operations both matter.

Experience

IT Infrastructure & Incident Management Specialist

Scanntech Uruguay · Contract | Jul 2024 – Present

Responsible for the reliability and operational continuity of critical systems, combining infrastructure administration with incident management engineering under the ITIL framework.

- **Proactive observability:** Design and tuning of monitoring and alerting rules in Zabbix/Nagios to detect anomalies before they impact the business, reducing incident detection time.
- **End-to-end incident management:** Ownership of the full incident lifecycle from detection through resolution, including technical escalation and cross-team coordination.
- **Continuous improvement:** Leading Post-Incident Reviews (PIRs) to identify root causes and drive infrastructure changes that prevent recurrence — not just post-mortem documentation.
- **Infrastructure optimization:** Refining monitoring and alerting architecture to reduce false-positive noise and improve signal quality for the operations team.

DevOps Engineer

Avenga | 2022 – 2024

- Containerized and orchestrated enterprise Node.js and Java applications using Docker and Kubernetes for insurance systems built on Guidewire.
- Led the migration from IBM CloudFoundry to CodeEngine for a large-scale insurance platform.
- Built and maintained CI/CD pipelines using TeamCity and Jenkins.

Network Engineer

Internet Para Todos LR | 2010 – 2022 (11 years)

- Designed and operated carrier-grade access infrastructure: HFC/DOCSIS and FTTP networks.
- Implemented and managed advanced routing across Cisco, Juniper, and Mikrotik platforms.
- Deployed and maintained site-to-site IPsec VPNs for financial institutions.
- Administered virtualized infrastructure using **Proxmox** and **VMware**, managing VM lifecycle and critical network services across production environments.
- Automated network operations tasks using Python and Bash.
- Led the transition of network infrastructure to IPv6.

Infrastructure & Systems Administrator

OLPC Project — Programa Joaquín V. González · Full-time | Feb 2010 – Sep 2010 (8 mos) | La Rioja, Argentina · On-site

- **Scalable automation:** Orchestrated the automated deployment and lifecycle management of 150+ Fedora-based servers using Puppet and Kickstart, standardizing environments for an expansive elementary school network.

- **System scripting:** Engineered mission-critical automation scripts in Python and Bash to streamline school-server synchronization and local network optimizations.
- **Distributed management:** Spearheaded remote administration and monitoring for a high-availability server fleet, ensuring seamless digital access for students and educators across diverse geographic locations.

Skills

Networking: MPLS, BGP-adjacent routing, IPsec VPNs, HFC/DOCSIS, FTTP, IPv6, Cisco, Juniper, Mikrotik **Virtualization:** Proxmox, VMware **Configuration Management & Provisioning:** Puppet, Kickstart **Containers & Orchestration:** Docker, Kubernetes **Cloud Platforms:** IBM CloudFoundry, IBM CodeEngine **CI/CD:** TeamCity, Jenkins **Monitoring & Incident Management:** Zabbix, Nagios, ITIL, Post-Incident Reviews (PIR) **Automation & Scripting:** Python, Bash, PowerShell

Certifications

- CKA (Certified Kubernetes Administrator) — *in progress*
- CompTIA Security+ — 2010

Education

Maestro Mayor de Obra Escuela Provincial de Educación Técnica N°2 | 2001 — Completed

Ingeniería en Sistemas (*Incomplete*) Universidad Nacional de La Rioja | Started 2002

Languages

- Spanish — Native
- English — B2 (Upper-Intermediate)
